

Gateway options for OEMs and installers

The Problem

Installers and OEMs need a fast, affordable way to connect inverters to DNSP utility servers for compliance without rebuilding their entire control architecture.

Our Solution

Marshall's Gateway offering connects directly to the inverter and communicates with the DNSP server via ZECO's secure cloud. The gateway manages dynamic export functions, data reporting, and compliance under CSIP-AUS, all without custom firmware or extra development.

Outcome

Both installers and manufacturers gain a plug-and-play path to compliance. The gateway simplifies approvals, reduces costs, and ensures systems can dynamically export from day one, backed by ZECO's support network.
