

MARSHALL

Multiple Brands of Batteries

The Problem

When multiple battery brands operate on one site, their differing control protocols can prevent coordinated operation, reducing efficiency and complicating compliance.

Our Solution

Marshall standardises communication between mixed battery systems. Using its control framework and cloud-based coordination logic, Marshall harmonises charge and discharge schedules and ensures all batteries follow site-wide export and safety rules.

Outcome

Operators gain unified control of all storage assets. Regardless of brand or model, batteries now act together under a single export strategy, maximising flexibility and performance while maintaining CSIP-AUS compliance.
